

Marine Systematic Cause Analysis Technique

An Introduction

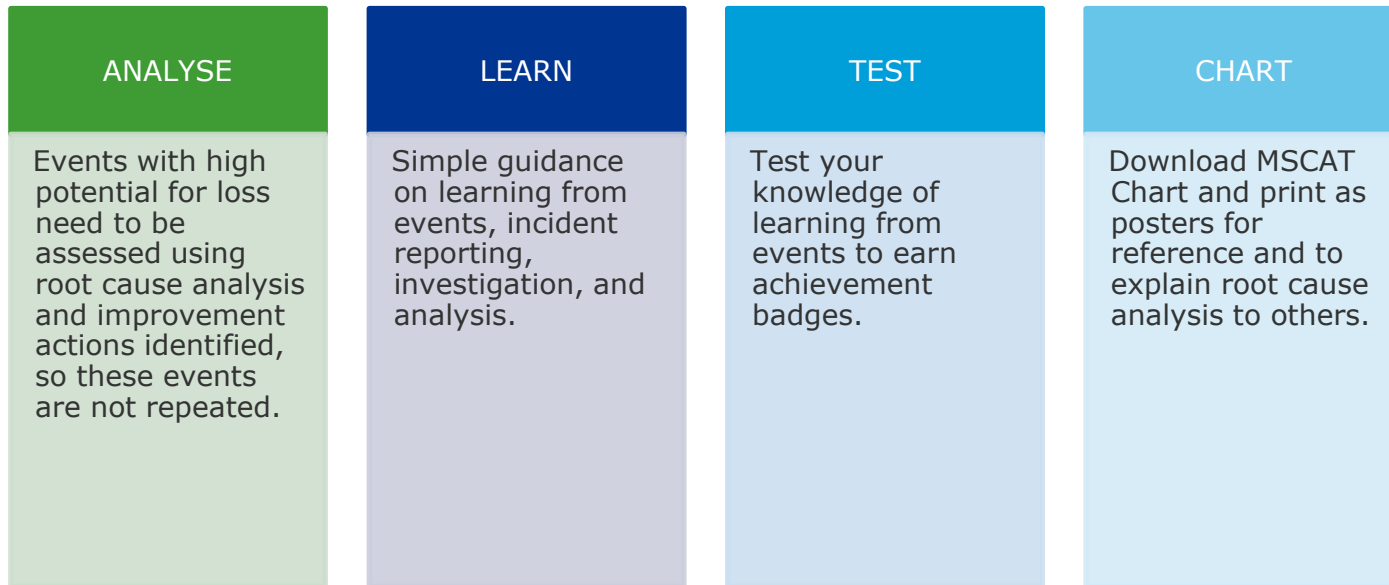

Root Cause Analysis and MSCAT

- MSCAT is based on DNV GL's loss causation model
- All accidents are the result of similar basic causes
- Accidental losses are mainly due to management system failures
- The DNV GL Loss Causation Model helps us to understand why accidents are caused and what must be done to control these causes

MSCAT Software Functions

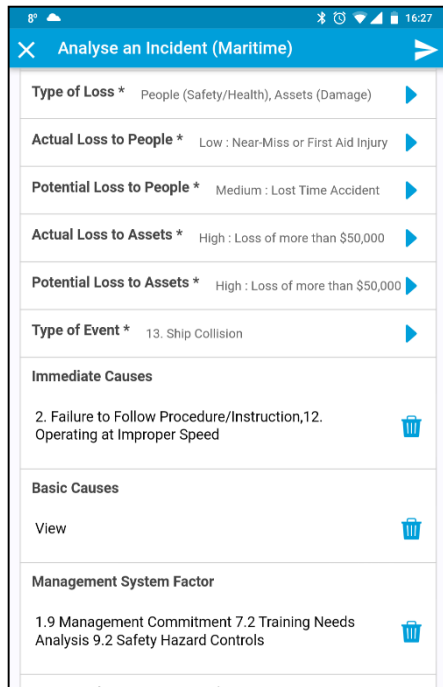

Use this simple software on your phone, tablet or desktop and begin driving down your accident rates and improving organisational performance.

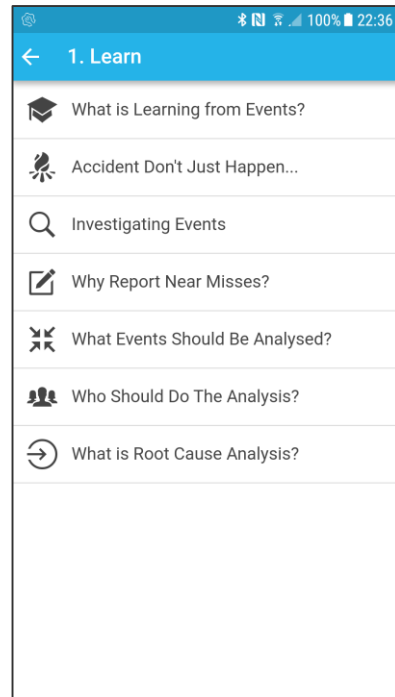

MSCAT software is provided using DNV GL's HiPo software platform.

  
Available for desktop, android and apple devices
